

# Lecture 8 Monetary Policy

Fei Tan

Department of Economics  
Chaifetz School of Business  
Saint Louis University

Macroeconomics 201

March 23, 2025

# The Road Ahead...

- ① What Is Monetary Policy
- ② Money Market and Federal Funds Rate
- ③ Monetary Policy and Economic Activity

# What Is Monetary Policy?

- ▶ Federal reserve system
  - ▶ established in 1914 as lender of last resort to prevent panics
  - ▶ central bank in U.S., bankers' bank
  - ▶ make discount loans to banks, charge discount rate
- ▶ Nowadays Fed manages policy targets (money supply & interest rates) to achieve macro objectives
  - ▶ **dual mandate**: price stability & high employment
  - ▶ stability of financial markets & institutions
  - ▶ long-run economic growth
- ▶ Fed's conventional policy tools, e.g. open market operations, discount policy, reserve requirements

# The Road Ahead...

- ① What Is Monetary Policy
- ② Money Market and Federal Funds Rate
- ③ Monetary Policy and Economic Activity

# Money Market Equilibrium Revisited

- ▶  $M^s \uparrow \Rightarrow M^d < M^s \Rightarrow i \downarrow$  to restore equilibrium
- ▶ Short-term nominal rate v.s. long-term real rate

# Federal Funds Rate

- ▶ Interest rate banks charge each other for overnight loans
- ▶ Target rate (Fed) v.s. effective rate (federal funds market)
- ▶ Open market purchase (sale)  $\Rightarrow$  reserves supply  $\uparrow$  ( $\downarrow$ )  $\Rightarrow$  effective rate  $\downarrow$  ( $\uparrow$ )  $\Rightarrow$  other short/long-term rates  $\downarrow$  ( $\uparrow$ )

# The Road Ahead...

- ① What Is Monetary Policy
- ② Money Market and Federal Funds Rate
- ③ Monetary Policy and Economic Activity

# Effects of Monetary Policy

(a) Expansionary monetary policy

(b) Contractionary monetary policy

- Expansionary (contractionary) monetary policy
  - $i \downarrow (\uparrow) \Rightarrow$  borrowing cost  $\downarrow (\uparrow) \Rightarrow C, I \uparrow (\downarrow)$
  - $i \downarrow (\uparrow) \Rightarrow$  \$ depreciates (appreciates)  $\Rightarrow NX \uparrow (\downarrow)$
- AD curve shifts to right (left)

# Effects of Monetary Policy (Cont'd)

- Expansionary/loose monetary policy to fight recession

# Effects of Monetary Policy (Cont'd)

- Contractionary/tight monetary policy to fight inflation

# Monetary Policy Rule

## Taylor rule

$$i_t^* = r_n + \pi_t + a(\pi_t - \pi^*) - b(u_t - u_n)$$
$$\Rightarrow i_t^* = r_n + \pi^* + (a + 1)(\pi_t - \pi^*) - b(u_t - u_n)$$

- ▶ Some remarks
  - ▶ suggested by John Taylor for setting target rate  $i_t^*$
  - ▶  $r_n$ : natural real rate, consistent w/ potential GDP
  - ▶  $\pi_t - \pi^*$ : gap b/w inflation and target
  - ▶  $u_t - u_n$ : gap b/w unemployment and natural rate
  - ▶ counter-cyclical policy:  $a > 0$  and  $b > 0$
  - ▶ Taylor principle:  $\pi_t \uparrow \Rightarrow i_t^* \uparrow$  more than one for one

# Readings & Exercises

- ▶ Readings

- ▶ HO: chapter 15

- ▶ BJ: lecture 20 (supplementary)

- ▶ Exercises

- ▶ HO: problem 1.2, 2.5, 3.6, 4.4, 4.5, D15.2

- ▶ Write down Taylor rule and discuss how it explains implementation of monetary policy.
